About Van den Berg BV.

It was Henk van den Berg Sr. Who founded Van den Berg in 1959. He traded drains that he bought in Belgium from the shed behind his house. Later he started producing his own drains from cast aluminium, this became a great success and in 1974 the barn was too small and the company moved to Lelystad, at that time a very new city located in the center of The Netherlands.

34 years after the company was founded, Henk Sr. passed the baton to his son. With the same drive as his father Henk Jr. ensured a stable growing company. Around 2004 he decided it was time to expand the business with shower channels. And that has taken off considerably.

Since 2019, Henk jr. children have been in charge of the company, which has a sales area in Europe, the Middle East and the Antilles. Although in 2023 more shower drains than shower channels have been sold, Joost, Joey and Femke are targetting on expanding the product range in stainless steel and plastic materials. Matte black is the absolute bestseller when it comes to color products, rosé gold and brushed brass also work well, especially in bathrooms with the same color scheme. For us it is self-evident that input from customers and users form the basis of the in-house product development.

Van den Berg works exclusively with permanent partners who follow the process developed by Van den Berg. The first drains made of recycled materials are now fact. With plastic from the automotive industry, we make new drains from old materials that are fully recyclable even after their lifespan. The fact that Van den Berg has sustainability in it's scope is also proven by the solar panels on the roof that compensate for the company's entire electricity consumption. Furthermore, all products are produced on Dutch soil. This is not only an advantage in limiting CO2 emissions because no long distances have to be bridged, it is also good for the local economy and the delivery time of the products.

In this brochure you will find our extensive range of shower products

The selected contemporary and stylish shower drains and shower channels in combination with other exclusive elements in the bathroom from a luxurious unity and collective.

There is a suitable drain for every budget and there is a choice of several colors.

Because we fully stand behind our products, we provide a 10-year product warranty.

We hope you enjoy reading our brochure and selecting of the right drain that fits nicely with your bathroom.

Current information can always be found on our website vandenbergafoerputten.nl

Why PVD?

The terms PVD Coating, Tin Coating or Titanium Nitride Coating stand for the same process and, in contrast to e.g. galvanic processes, does not use environmentally harmful or toxic substances. The extremely thin layers are naturally extremely metallic and lively in appearance, which makes them stand out from powder coating and wet painting. In addition to the fact that there are technical advantages to be achieved, such as an increase in corrosion resistance due to the hard layer, there are create fascinating, visually appealing colour tones such as Yellow/Gold/Brass look, Rose/Copper, as well as Black and Anthracite.

And then each time with a different surface, for example a ground, polished or blasted finish, which is a very exclusive radiance to the stainless steel plate. This allows architects or designers to create brilliant designs for in-and outside buildings.

Brushed Rosé Gold

The colours rose gold or copper gold are these days impossible to imagine life without it in the world of home accessories and jewellery. The allure of gold in combination with the subtle copper tone, it creates a refined look and because of the brushed finish this brings an extra luxurious feel with it. By colouring brushed rose gold, Combining with pastel shades becomes a somewhat feminine or vintage atmosphere.

Looking for a custom shower channel? At Van den Berg we are specialized in creating solutions that suit your unique situation. Although our range is extensive and we have different widths and connection options available in stock, we understand that there are situations where a customized solution is required.

Custom shower channels

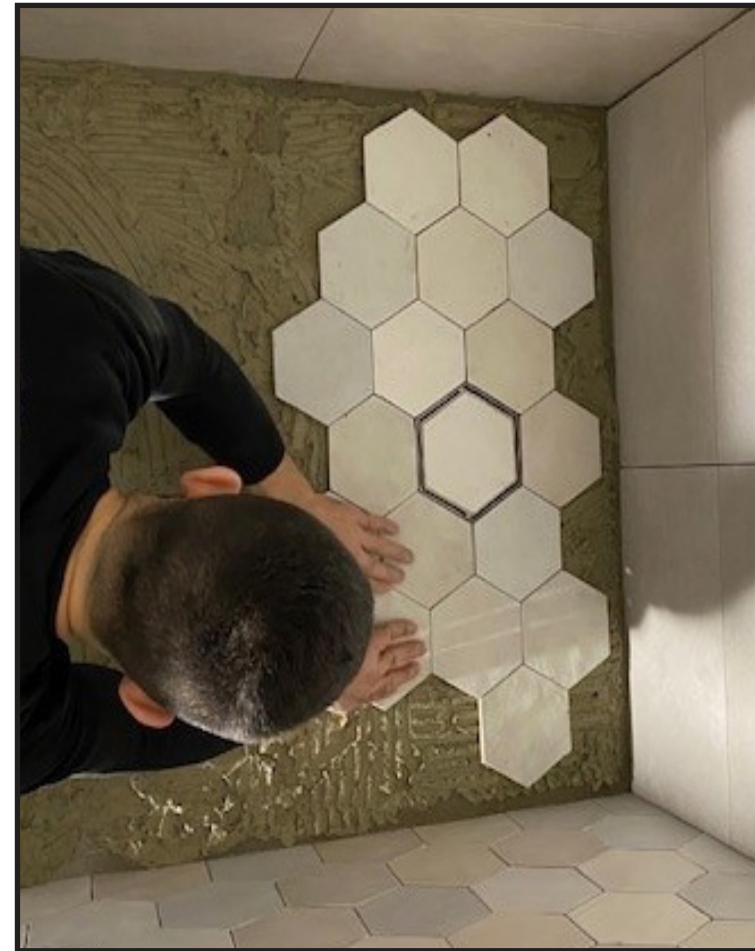

Our custom shower channels offer numerous options. For example, you can choose a shower channel with multiple drain points where you determine the exact position of the drains yourself. This can be useful in a shower room with multiple showers, such as in a sports center, or in a shower with massage jets where all water must be drained properly.

We can also provide custom-made shower drains in special lengths, widths or heights. For longer lengths we use tileable gratings that consist of several parts exist for extra strength. For extra support you can opt for a collapsible flange around the channel, a wall flange or a combination of both. And the Cherry on top is that you can too choose a specific color or a personal text or logo in the grating.

In addition to a custom shower channel, are you also looking for a custom shower drain? Don't worry, we also have extensive experience in this to help you. A good example of our craftsmanship is the hexagonal tile drain, which we can make in almost any size and perfectly connects to the popular Hexagon tile. There are many options available to create a suitable shower drain in every room.

Rapid delivery

At Van den Berg we understand that every project is unique and that is why we are happy to offer tailor-made solutions. Our delivery time for custom work is only 3-4 weeks after order, so you can quickly continue with your project.

Wellness

There are connectable slot channels for professional use, especially for wellness, sports showers and around swimming pools. These channels can be connected infinitely, there are parts with a tile grid and extensions of 500 and 1000 mm. Pairing is done by means of bolt nut connection with a viton gasket. Corner or T-pieces can be made on request. The inlet slot is only 8 mm wide and therefore safe to walk on barefoot. The material of these channels is stainless steel 316, which is better suited to use in a environment where, for example, chlorine or salt is present in the water.

art.	Discription
660.1000	channelpart 1000 mm with outlet and tiletray
661.500	extension channelpart 500 mm
661.1000	extension channelpart 1000 mm
660.100	end plate
660.101	Gasket with mounting material

All parts of our shower drains and channels remain available from stock. This guarantees that if a part disappears or if you want to replace it these are immediately available
